

FENCE WRAP

Vision's fence wrap is a polystretch fabric that is perforated with small holes designed to allow wind to pass through. This fabric uses a printing process that will bleed through allowing the design and color to be viewed on both sides. We have used this wrap for many outdoor events including the NFL Super Bowl, NCAA Orange Bowl and BCS Championship Game. Polystretch fabric was also used at the 2002 Winter Games in Salt Lake City.

This lightweight fabric is very durable and has reinforced hems with grommets. Polystretch provides a custom look to an event while assisting with crowd control.
