

## BLEACHER BACKS

Bleacher backs are printed on 10 oz vinyl mesh using a 5-meter printer. This mesh product allows the wind to pass through thereby preventing damage to the graphic or structure. The 5-meter substrate minimizes the number of seams in the graphic while the color is vivid across the entire print.

Vision used this product on the bleacher backs at the sports venues during the 2002 Winter Games in Salt Lake City. We also used mesh for the XXL graphics at the last five Super Bowls. We use it regularly to produce wraps and wallsapes on buildings across the country from Los Angeles to New York.
