

Vision Plus Mesh (63/37)

Vision Plus Mesh is an 8 oz. coated polyester scrim mesh banner material. This economical light weight material can be printed on one side and allows 37% air-flow through making it ideal for building, stadium and fence wraps. Vision Plus Mesh can be printed with solvent and UV printers that have mesh kits. This product is also available with a PVC backer that peels off after printing. It is available in a 126" and 196" width.

All statements, technical information and recommendations about Vision Graphics substrates are based upon tests believed to be reliable but do not constitute a guarantee or warranty. All Vision Graphics products are sold with the understanding that the purchaser has independently assumed responsibility in determining the suitability of such product for its purposes. +1/-2 variance is allowed on all specs.

It is the responsibility of purchasers to independently verify, prior to use, the suitability of the products for their specific applications and print methods. SBR/Vision Graphics cannot be held liable for any misuse, damage or losses as specified in its product warranty. Subject to change without notice.

Pockets on Back

Finishing Type 05 (and the previous type 04). Standard banner pocketing. Can be welded or sewn. The outside edge of the pocket can be aligned to the Live Area or Additional Material can be included. Options include single or double pockets and/or reinforcement.

Pockets on Front

Finishing Type 06. Standard billboard finishing. Can be welded or sewn. Options include single or double pockets and/or reinforcement. This type is most economical but limits the amount of bleed.

Frontlit Bulletin Nomenclature & Measuring Guide

The terms and measurements required to accurately produce a Frontlit sign can be confusing. Communicating with everyone from artist to installer is simplified when everyone is speaking the same language. Shown below in detail is a typical Bulletin with Pockets on the Front.

Terms to Understand

- Live Area:** The area visible from the front after installation.
- Additional Material:** Any additional material added between the Live Area and the Finished Edge.
- Bleed:** Image that is printed beyond the Live Area to cover the edges of the structure or "just in case" the structure measurements are slightly off or the image is not installed perfectly.
- Safety Margin:** An arbitrary distance from the Live Area inward to prevent critical copy/artwork from being too close to the edge.
