Flat Panel. Real Dimension.

A textured dimensional architectural panel system that adds tactile depth and perceived material value. Without the cost or weight of the real thing.

DimenTexTM
Textured Dimensional UV Print System

Flat Reads as Ordinary. Dimension Reads as Considered

Built With Depth, Not Just Color

DimenTex is available in architectural-grade panel constructions selected for the project environment: interior or exterior, flat or dimensional. The result is a surface with genuine tactile texture: layered, contoured, and built to catch light and shadow the way a real dimensional material would.

Up close, that's the real proof. No photograph of a finished wall shows what a hand feels running across the surface. The texture isn't printed to look dimensional. It's built to be dimensional.

A flat printed graphic can carry outstanding color and detail. But set next to real stone, wood grain, or brushed metal, it can still read as a stand-in. The eye picks up on the absence of depth even when it can't name why.

Architects and designers have historically faced two options: source and install the real material at real cost and weight, or accept a flat graphic and the compromise that comes with it.

DimenTex closes that gap. It's a textured dimensional architectural panel system that adds tactile depth and perceived material value to a printed surface. At a cost comparable to a standard flat graphic, not to the material it evokes.

What that means in practice:

- A genuine tactile surface, not a flat illusion
- Panel constructions selected for your specific environment
- Painted and specialty finish options available on compatible constructions
- Custom sizes and cut-to-shape forms

Perceived value, without the premium cost.

Dimensional material reads as considered, expensive, deliberate. DimenTex delivers that read at a cost comparable to flat printed graphics, not to the material it's evoking.

Built for the space, not squeezed into it.

Custom sizes, cut-to-shape forms, and large-format panel capability mean the design isn't compromised by standard sheet sizing.

Specified for the environment.

Interior and exterior configurations are available, with material-specific fire-rated options confirmed per project. No single blanket rating is stretched across every configuration.

Mounted to match the application.

Mechanical, stand-off, rail, or concealed mounting options are available depending on the application, so installation fits the design intent instead of dictating it.

Wherever a flat surface is being asked to feel like more:
a wall, a display, a name on a wall, DimenTex is built for it.

Accent Walls

An accent wall's whole job is to hold attention without a full remodel. Dimensional texture does that on its own. Color and contour work together, not color alone.

Hospitality

Hospitality spaces live or die on whether a lobby, a lounge, or an entry feels designed rather than furnished. Dimensional texture adds that sense of depth and craft at entry points and gathering spaces, without full architectural millwork.

Retail Displays

Retail texture has one job most flat graphics can't do: invite a hand as well as an eye. A dimensional display wall gives shoppers something to notice and something to touch before they ever reach the product.

Donor & Identity Recognition

A name on a flat plaque and a name built into a dimensional, textured surface send two different messages. DimenTex gives recognition: donor names, brand identity, mission statements, the architectural presence a flat sign can't match.

Specifications & Compliance

Finish System

Textured dimensional architectural panel system

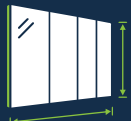

Design Flexibility

Custom sizes and cut-to-shape forms; painted and specialty finish options available on compatible constructions

Environments

Interior and exterior configurations available

Scale

Large-format panel capability

Fire & Life Safety

Material-specific fire-rated options available, confirmed per project; not offered as a single rating across all configurations

Mounting

Mechanical, stand-off, rail, or concealed mounting options by application

Best suited for

Accent walls, hospitality, retail displays, donor and identity recognition
